

MOBILE INVENTORY

A single solution that addresses the full inventory management work flow for all material regardless of who supplied it or where it is stored.

KEY BENEFITS

Grow revenue by completing more jobs per technician per day

Minimize shrinkage with tighter inventory controls and track all material usage down to the job or technician

Cut ordering costs by 25% and avoid excess purchases with automated replenishment

Achieve full inventory visibility of all stocking locations including your warehouse and service fleet

Eliminate technician downtime by having the right parts to finish the job the first time

"It puts the ownership on the technician that is using the software! You can track, see their usages, make sure procedures are being followed to help the team save money and serve our customers better and faster."

MICHAEL FOX

General Manager, Aux Mechanical

MarginPoint is a leading provider of mobile-enabled field service and inventory management software that helps service contractors control inventory costs while improving customer service and growing revenue. The company provides the only supplier integrated solution that addresses the full inventory management workflow for all material regardless of who supplied it or where it is stored. MarginPoint is uniquely focused on integrating the entire end-to-end material lifecycle and job workflow in order to deliver the highest possible ROI to our customers.

DETAILED FEATURES & BENEFITS

Real-Time Visibility

Manage your inventory anywhere, anytime

- See exactly what you have on hand across your entire organization
- Receive the data necessary to go lean by reducing carrying costs, avoiding excess purchases and achieving material savings opportunities
- One platform to manage all your inventory needs regardless of supplier or where the material is stored
- Tighter controls of issuance and tracking of all inventory transactions will provide a clear audit trail down to the end user, job, or even customer

Automated Material Replenishment

Base your replenishment on actual usage and sales demand

- Optimal inventory levels maintained through automated restock workflows
- Eliminate stock outs and shortages of material
- Automated demand signals significantly reduce time spent procuring more material
- Avoid excess purchases and consolidate purchase orders

Inventory Control

Improve customer retention by having the right parts to finish the job

- Set minimum and maximum order quantities, approve orders, and more
- Check-in check-out functionality tracks expensive tools and technology
- Real-time fleet inventory enables smarter scheduling decisions
- Avoid costly downtime spent chasing material
- Easily re-tool your fleet for different jobs or even seasons

Mobile Optimized

Enable your workforce to instantly update inventory as they perform transactions

- Full set of transactional capabilities to capture material usage, even without cellular service
- No need for costly hardware – perform transactions in the palm of your hand
- Includes functionality for barcode and QR code scanning

TECHNOLOGY

- Cloud-based software powered by Microsoft Azure
- Ability to integrate with ERP and business applications via open API platform framework
- Mobile app available for both iOS and Android devices

SERVICES PROVIDED

- Design, Implementation & Deployment
- Post-Deployment Optimization
- Support Services
- Education & Training
- Data Services
- Business Process and Advanced Product Use
- Reporting Key Performance Indicators (KPI's)
